INTRODUCTION

PROJECT OVERVIEW

SOLUTION

We developed a Python quiz in which users register and must type their own answers to each question.

WHY IT MATTERS

The project provides a simple and interactive way to test knowledge, encouraging memory, reasoning, and user participation.

PROBLEM STATEMENT

Analyzing our target audience, we came to some conclusions; many of them reported:

- ✓ Ready-made alternatives make guessing easier.
- ✓ Limited challenge when testing the user's actual knowledge.
- ✓ Less interaction because users only choose between given options.

PROJECT OBJECTIVES

Desired Result

- ✓ Develop a functional quiz system using Python and basic programming concepts.
- ✓ Create an interactive learning experience by allowing users to type their own answers.
- ✓ Apply programming concepts in practice, such as variables, lists, dictionaries, functions, loops, and data storage.

METHODOLOGY

THE STEPS TO BUILDING THE PRODUCT

Planning

Definition of questions and quiz structure

Programming

Development of the quiz using Python and JSON.

Final Result

Registration

Creation of the user registration system.

Verification

Checking answers and counting correct responses.

TARGET AUDIENCE

WHO WE DESIGNED FOR

✓ Students

✓ Teenagers

USE CASE DIAGRAM

INTERACTION OF USERS (ACTORS) WITH THE SYSTEM

FLUXOGRAM

System Prototype

RESULTS

CONCLUSIONS AND EXPECTED CONTRIBUTIONS

- ✓ - Integrated a validated Python backend with a Streamlit UI
- ✓ - Centralized catalog with validation to prevent errors
- ✓ - Automated checkout/return with real-time availability
- ✓ - Blocked double-borrowing by fixing critical logic bug
- ✓ - Enabled data-driven decisions via live metrics
- ✓ - Result: a more organized and reliable library system

Thank You!

감사합니다!
